

Units and Measurements

Questions Bank

Physics Practice Series

Question 1

Define plane angle.

Question 2

Write the SI unit and dimensional formula of energy.

Question 3

Fill in the blanks:

Name of base quantity	Name of SI unit
Length	metre
Mass	
.....	second
Electric current	
Thermodynamic temperature	
.....	mole
.....	candela

Question 4

- (i) State the principle of homogeneity of dimensions.
- (ii) A planet moves around the Sun in nearly circular orbits. Its period depends on radius (r) of the orbit, mass of the Sun (M) and gravitational constant (G). Derive the expression for its time period of the planet using the method of dimensions.

Question 5

Fill in the blanks in the table below:

Quantity	SI Unit	Symbol of SI unit
Time	second	_____
Electric current	_____	A
_____	steradian	Sr
_____	mole	mol

Question 6

[2021 IMPROVEMENT]

Centripetal force (F) depends on mass (m) of the object, its velocity (v) and radius (R) of the circle. Using the method of dimensions derive an equation for centripetal force.

Question 7

The restoring force developed in a spring extended by a length ' x ' is $F = kx$. The dimensional formula of ' k ' is:

Question 8

[2022 MARCH]

Check the dimensional correctness of the relation:

$$v = \sqrt{\frac{GM}{R}}$$

Where v is the orbital velocity, G is the gravitational constant and R is the radius of earth.

Question 9

Light year is the unit of

- (a) time
- (b) distance
- (c) velocity

Question 10

1 Å(angstrom) =

- (i) 10^{10} m
- (ii) 10^{-15} m
- (iii) 10^{15} m
- (iv) 10^{-10} m

Question 11

[2023 MARCH]

- (i) What do you mean by principle of homogeneity of dimensions?
- (i) Using this principle, check whether the following equation is dimensionally correct:

$$\frac{1}{2}mv^2 = mgh$$

- (i) State the number of significant figures in the following:

(i*) 0.060607 m²

(i*) 6.0320 N m⁻²

Question 12

Which of the following is a fundamental quantity?

- ☐ Volume
- ☐ Mass
- ☐ Density
- ☐ Pressure

Question 13

[2023 IMPROVEMENT]

- (i) Using the principle of homogeneity of dimensions check whether the equation $\frac{1}{2}mv^2 = mgh$ is dimensionally correct.
- (ii) There is a famous relation in physics which relates moving mass ' m ' with rest mass ' m_0 ' and velocity ' v '. A boy recalls the relation almost correctly as:

$$m = \frac{m_0}{(1 - v^2)^{\frac{1}{2}}}$$

but forgot to put the velocity of light ' c ' in the equation. Where is the correct position of ' c ' in the above equation?

Question 14

The dimensional formula of gravitational constant is:

☐ $[MLT^{-2}]$

☐ $[ML^2T^{-2}]$

☐ $[M^{-1}L^3T^{-2}]$

☐ $[M^{-1}L^2T^{-2}]$

Question 15

Write two uses of dimensional analysis.

Question 16

[2024 MARCH]

State number of significant figures in:

(1*) 6.320 J

(1*) 2370 g cm⁻³

Question 17

Find out the fundamental quantity from among the physical quantities given below:

- ☐ Velocity
- ☐ Temperature
- ☐ Force
- ☐ Density

Question 18

[2025 MARCH]

- (i) State the principle of homogeneity of dimensions.
- (ii) Consider a simple pendulum, having a bob attached to a string that oscillates under the action of the force of gravity. Suppose that the period of oscillation of the simple pendulum depends on its length (l), mass of the bob (m) and acceleration due to gravity (g). Derive the expression for its time period using method of dimensions.
